

Samuel Effiong

Full-Stack Engineer

Full-stack engineer with 3+ years of experience building and shipping production web applications independently from database design through cloud deployment. Specialized in Django/DRF SaaS architecture, payment infrastructure (Paystack & Stripe), async background processing, and scalable REST APIs. Focused on scalable SaaS systems, backend architecture, and production deployment workflows.

WORK EXPERIENCE

Full-Stack Engineer, Freelance / Self-Employed

2023 to Present | Remote

Sole engineer across backend, frontend, APIs, and cloud infrastructure, taking products from schema design to production deployment.

- Built 40+ REST API endpoints powering inventory, billing, POS, CRM, and reporting workflows across a multi-tenant SaaS serving isolated business accounts within a shared application environment.
- Integrated Paystack subscription billing end-to-end: plan creation, webhook verification, payment confirmation, grace-period enforcement, and upgrade/downgrade flows.
- Implemented Celery + Redis async processing for automated notifications, scheduled report generation, and payment retry workflows, eliminating manual follow-up on failed transactions.
- Deployed full production stack across Render (API), Railway (workers), and Vercel (frontend) with Docker containerization, environment-based configs, and Cloudflare DNS caching.
- Delivered a second production project: a freelancer client management platform with Stripe billing, invoice generation, and multi-role authenticated dashboards.

FEATURED PROJECT

Giztrack Multi-Tenant B2B SaaS Platform

github.com/Sam-eff | Demo available on request

- SaaS platform built for Nigerian tech retail and repair shops: 7 modules covering inventory, POS/sales, repairs tracking, customer CRM, business reporting, and subscription billing.
- Tenant-isolated architecture: each business account operates in a fully separated PostgreSQL schema within a shared instance, with zero data bleed by design.
- Subscription tiers enforced at the API level: plan limits, grace periods for failed payments, and upgrade/downgrade flows handled via Paystack webhooks.
- React + TypeScript frontend with protected routes, role-based access, and API-driven data, fully integrated with the Django backend and designed for non-technical shop owners.
- Built solo over 12+ months of continuous development, shipping 7 major modules with full backend, frontend, async processing, and billing infrastructure.

SKILLS

Languages & Frameworks:

- Python
- Django & DRF
- React
- TypeScript
- JavaScript
- HTML / CSS

Data & Infrastructure:

- PostgreSQL & SQLite
- Redis & Celery
- Docker
- Git / GitHub

Deployment:

- Render
- Railway
- Vercel
- Cloudflare
- Azure (learning)

EDUCATION & CERTIFICATIONS

HIIT Institute

Diploma in Web Design
2022

HIIT Institute

Certificate in Python Programming
2022

HIIT Institute

Certificate in Django Framework
2023
